EXAMINER'S AMENDMENT

1. Applicant's election of claims **10-21** is acknowledged. Because Applicant did not distinctly and specifically point out the supposed error in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Applicant have the right to file a divisional application covering the subject matter of the non-elected claims 1-9.

The traversal is on the ground(s) that see the election paper. This is not found persuasive because the fields of search for method' and device claims are NOT coextensive and the determinations of patentability of method and device claims are different, that is process limitations and device limitations are given weight differently in determining the patentability of the claimed inventions. Also, the strategies for doing text searching of the device claims and method claims are different. Thus, separate searches are required.

The requirement is still deemed proper and is therefore made **FINAL**.

2. An examiner's amendment to the record appears below. Should the change and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in an interview with Attorney, Joseph A. Sawyer, Jr., on 9/27/04.

Cancel claims 1-9, 11-12, 17-19.

REASONS FOR ALLOWANCE

3. Claims 10, 13-16, 20-21 are allowed.

Art Unit: 2818

4. The following is an examiner's statement of reasons for allowance: None of the references of record teaches or suggests as cited in claims 10, 16: a plurality of metals within the slot, wherein the plurality of metals comprises three metals, wherein the first and second metals fill the slot and the third metal provides an interconnect layer, wherein the at least one slot is oxidized everywhere except at the bottom of the slot where the interconnect forms a ground strap (as cited in claim 10); an interconnect on the semiconductor substrate, the interconnect comprising at least one slot provided in the semiconductor substrate and a plurality of metals within the at least one slot, wherein the plurality of metals comprises three metals, wherein the first and second metals fill the slot and the third metal provides an interconnect layer, wherein the at least one slot is oxidized everywhere except at the bottom of the slot, and the interconnect forms a very low resistance ground strap (as cited in claim 16).

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

CONCLUSION

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Yamada (6,008,127): Semiconductor Device Having Etching Stopper Layer Formed by Oxidation and Method of Fabricating the same.
